

Livebox

Streaming Box

* Only Livebox PRO

1/20* Channels

There are one built-in channels in Livebox, and Livebox PRO even reach to 20 live channels. The users can set their own live channels for iCam camera or live classroom of SES Ultimate. You can switch channels with mouse or Livemote App through Internet.

HDMI Audio Output

Livebox has the built-in High Definition Multimedia Interface. HDMI is a full digital video and audio transfer interface. It can transfer uncompressed audio and video signal. As the audio and video signal are transferred through the same cable, it can avoid signal attenuation and simplified the cable installation. The HDMI of Livebox can meet the demand of display and high definition in all kinds of the situation.

Wireless Network Transfer

Livebox not only support wired network, but the new generation Livebox can also support wireless network. The user can define the Livebox as a mobile broadcast station. With wireless network, you can build a high quality broadcast station and have a first-hand broadcasting wherever network connected. Besides connecting network, Livebox can be mobile hotspot itself to control and switch channels through the smartphones or tablet with Livemote APP.

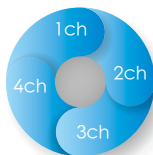

Livebox APP Control

To make the users easier to switch channels or change Livebox settings, we specially designed Livemote remote controller APP to control through smartphones and tablets of Android. You can install Livemote APP on phones or tablets and connect to Livebox to switch channels, audio control or settings through TCP/IP network. It can also connect the wireless hotspot of Livebox.

Support iFollow shooting

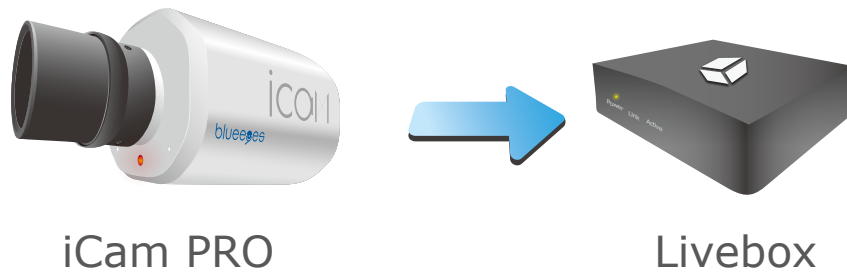

iFollow auto tracking is a new generation shooting technique of BlueEyes Technology. It shoot through many iCam from different angles or directions, and then edit to one video automatically. Livebox would automatically switch the shooting camera. You can install it in the classroom with iFollow and make it easier for the students sitting in the back row to watch the big monitor of auto tracking switch. Or installed in other branch schools to have classes with the classmates in head school at the same time. The live image and audio-video synchronization are suitable for live show or synchronous classes.

Carousel*

If you want several channels to take turn playing, carousel is what you need. With Livemote APP or mouse, you can set what channels to play, the time for each channel or whether to have carousel when starting up. With the auto carousel, you can supervise each channel without switching manually.
